## BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

**IMAGES ARE BEST AVAILABLE COPY.**

**As rescanning documents *will not* correct images,  
please do not report the images to the  
Image Problem Mailbox.**

Please amend the abstract on page 59 of the application as follows:

#### ABSTRACT

The present invention discloses an An optical switch is provided to which one or a plurality of input optical fibers and a plurality of output optical fibers are connected and in which an optical path of light for optical communication emitted from the input optical fiber is switched to a plurality of optical paths through a second galvo unit and a first galvo unit so that the light can be incident on the output optical fibers from which the light should be output. The optical switch includes a light guiding unit for guiding the light to be incident on the output optical fiber to a photo-sensor and a control unit for controlling the angle of the second galvo unit and the angle of the first galvo unit on the basis of a detection signal obtained through the light guiding unit.
